

BIVIS PLUS

INDICATIONS AND PROPERTIES

• *Echinacea purpurea*

Extracts from *Echinacea purpurea* are among the most widely used herbal medicines throughout Europe and North America for the prevention or treatment of infectious diseases, both acute and chronic ones. *Echinacea* shows many pharmacological properties: antiviral, anti-bacterial and anti-inflammatory. *Echinacea purpurea* contains multiple substances, of which polysaccharides, caffeic acid derivatives (cichoric acid), alkamides, and glycoproteins are the most important in activity. *Echinacea purpurea* was successfully introduced into China a few years ago, and its products have been applied increasingly in veterinary medicine. The studies indicate that *Echinacea purpurea* may exert an immunostimulating effect in many aspects, enhancing cytokine production, stimulating macrophages and T lymphocytes, and elevating NK cells.

• *Eleutherococcus senticosus*

Commonly known as Siberian ginseng, is an herb used in traditional medicine to combat fatigue. It is considered an adaptogen compound: it is indicated in all situations that weaken the organism, it can improve physical performance during period of high intensity exercise, it can also reduce the effects of stress stimulating the production of antibodies. *Eleutherococcus* also promotes appetite and can improve fertility by enhancing overall health and vitality. Siberian ginseng also acts on the brain to promote regulation of reproductive hormones.
