

EFFY GEL

INDICATIONS AND PROPERTIES

The product is indicated to stimulate the repair of the skin. It is useful during farriery operations.

This product is characterized by the addition of **menthol**, the active ingredient contained in the essential oil of mint, especially known for its property of supporting the refreshing, anti-septic and local anesthetic activity of the organism.

The product is based on the stimulating the healing properties of its components. **Echinacea** can help an immunostimulatory activity during infections of all types (viral, bacterial, allergic), in particular chronic ones; **Calendula** supports the anti-inflammatory, antimicrobial and antiviral properties, and when used locally, stimulates the healing, it also improves circulation making the skin more elastic and therefore more resistant to mechanical injuries; some chemical components of oregano and lemon helps the antibacterial and antifungal activity of the body. **Melaleuca alternifolia** favours the antibacterial property of the skin, in particular against resistant bacterial strains
